

CI: Harness. Notable features:

CI software: Harness automatically detects bad deployments by applying machine learning to data and logs from observability solutions. It even gives you the option to roll back to the previous version automatically. No more staring at the console for hours.

Easy way to setup: Yes. There is a setup video that helps to understand the process easily.

Documentation: Documentation is limited; however, there is a ticketing system to send concise questions if you need assistance (free of additional charge). Tutorial: great concise examples using videos. Trying out the software: You get to try the software immediately by creating a free account. Once you validated your email you are taken to the launch page. There are only 4 icons to choose from, one of which is continuous integration, once you select it, you will be able to create a new project. There is a 14-day tryout. Harness has been in the market since 2016 with a market share of 3%. One of its notable customers is eBay.

Real time Error Monitoring: Dynatrace: Application performance monitoring infrastructure monitoring and AIOps all in a single solution, with the option to add digital experience and business analytics functionality. Understand all relationships and dependencies across the full stack for precise answers.

Easy way to setup by completing a 3-way process. The instructions are presented in a graphic format. To start using the software, you must create an account that offers you a free trial. There is plenty of documentation. Dynatrace is the leader platform, and as such, it has organized the documentation with a search box where you can type a key word and immediately shows you the topics related to that word. There is a support ticketing system for specific questions as well. Dynatrace has been in the market since 2008, the market share is approximately 3%, one of its biggest customers is Kroger inc.
