

Write a function that takes in an array of numbers. The function should return True if any two numbers in list sum to 0, and false otherwise

```
int find_sumPair( A[], n)
{
    Sort(A, n)
    i = 0
    j = n - 1
    while (i < j)
    {
        if(A[i] + A[j] == 0)
            return true
        else if(A[i] + A[j] < K)
            i = i+1
        else
            j = j-1
    }
    return false
}
```
